Hanwha L&C was awarded the '2016 Healthy Housing Award' sponsored by the Korea Environmental Information Research Center and awarded by Director of the Korea Environment & Technology for its contribution to the healthy housing supply such as reduction of harmful substances in the residential environment

Environment

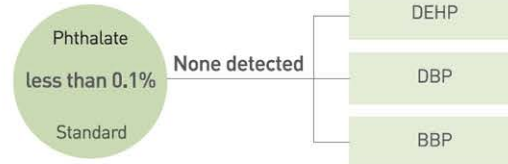

Environment

We consider nature Hanwha L&C's 'Bodaq' is an eco-friendly film that considers healthy environment.

- Free from harmful heavy metals (lead, cadmium, mercury, hexavalent chromium, etc).
- Formaldehyde (HCHO), the substance that causes sick house syndrome, is not released.
- Minimized the release of volatile organic compounds (TVOC, toluene, etc.) harmful to the environment by generating odor and ozone.
- It meets the safety standard (KC mark standard) applied to wallpaper and paperboard.
- Meets the safety requirements for hazardous chemicals in the Common Safety Standards of Children's Products.
- Excellent antimicrobial and anti-mold function, which helps to maintain a pleasant surrounding environment.

Heavy Metal *Pb, Cd, Hg, CrVI		Formaldehyde *HCHO	
Pb: mg/kg Cd: 0.5mg/kg Hg: 2mg/kg CrVI: 1mg/kg		0.12mg/m ³	
Standard	None detected	Standard	None detected

Hazardous chemicals criteria in the Common Safety Standards for Children's Products

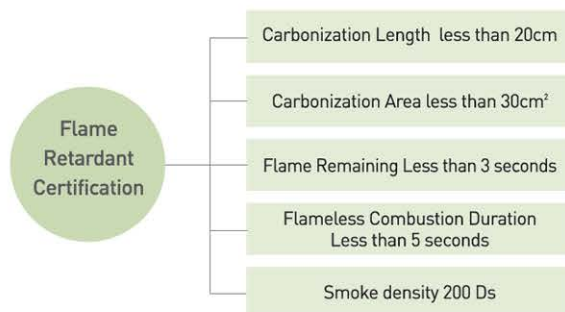

Hazardous Substances *Sb, As, Ba, Cd, Cr, Pb, Hg, Se	
Sb: 60mg/kg As: 25mg/kg Ba: 1000mg/kg Cd: 75mg/kg	Cr: 60mg/kg Pb: 90mg/kg Hg: 60mg/kg Se: 500mg/kg
Standard	Satisfactory
Standard	Satisfactory

Safety

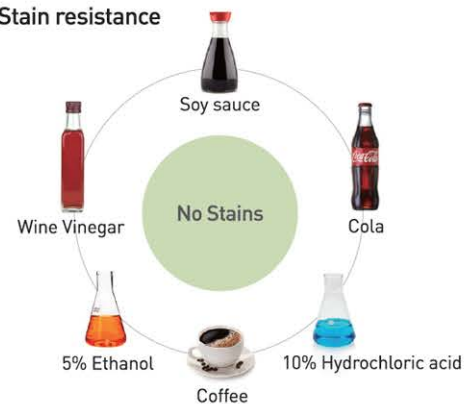

We consider Safety "Bodaq" is a safe interior film that can be used in any environment with excellent flame retardancy and quality stability.

Flame Retardancy (Certified by the Fire Industry Technical Institute)

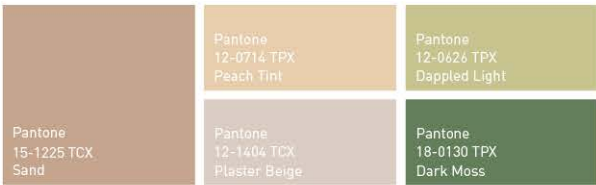

Stain resistance

※ Obtain the certificate, Introduction of company for bidding construction projects, construction guide of our products by inquiring with our head office or distributor.

Create unique spaces with our diverse patterns, luxurious designs and 3D effects

- Sticker- type products make installation quick and easy, even without the use of any professional tools.
- Easily applicable on glass, tiles, MDF, etc.
- Excellent product that has a high resistance against moisture and pollutants due to its special surface coating.

We apply strict standards that regards children's health and protect them from various harmful environments.

- Antifungal
- Antibacterial
- No detection of 6 heavy metals
- Formaldehyde not detected
- Reduction of TVOC (Sick House Syndrome-inducing chemicals)

Preparation

Check the condition of the type of surface which the film is to be applied before construction.

In the case of MDF, depending on the density, it affects the adhesion and stability in construction.

Therefore, it is necessary to use MDF with uniform density.

Surface treatment operations should be aware of the following characteristics

- Painted surface: It is necessary to remove the contaminants on the surface and proceed after the treatment of damaged surface.

- Non-painted surface: If the surface is rough, you should clean the surface with sandpaper first.

Prior to installation, check for any abnormality (product name, surface condition, flammability etc.) of the selected product.

When you build the site in weathers such as spring or autumn, or even during dawn, be sure to remove moisture that may remain on the wall.

[※ Please keep the temperature of the construction site at room temperature (15°C ~ 23°C) in order to remove moisture effectively]

Please keep in mind that when storing the product for a long time outside the packaging, it may cause cracking and weakening of the adhesives of the product.

If there is a gas generating substance or a wax ingredient on the base material (adhered surface), please note that the adhesive may weaken.

Primer treatment

The primer used in film construction shows the best performance and stability when using "OK primer" produced by Hanwha L&C.

MDF, PB and other woods have a very high absorption rate of primer due to the nature of the material. In case of the cut side, it should be applied 2-3 times.

It should be dried for at least 2 hours, and the film should be attached with an appropriate amount of force (pressure)

[※ OK primer (water-based) should be stored in a cool, shady place at room temperature. Please be careful when storing in winter because frozen products cannot be used.]

Notes on Construction

Since the color difference may occur between products (by printing LOT), it is necessary to check the LOT before construction.

The adhesive side of the interior film should be sanded and primer is recommended to reinforce adhesion.

In case of overlapping between products, certain patterns should be applied after primer application, and more force must be applied.

Notes on use according to the characteristics of each product material

AR(Z) line (Artificial Leather TYPE)

Due to the depth of the embossing, primer treatment and more pressure should be applied in overlapping and bending construction.

JS / JSB / JAS / JSP line (Premium Wallpaper TYPE)

Be careful not to break or burst the surface layer of special wallpaper type.

HD / HS line (High Gloss TYPE)

The hardness of the product is high that it needs to be finished with sufficient force to prevent cornering and to have a neat finish.

PZN line (Special Coated Suede TYPE)

Since it is a special surface coated product, please make sure to set the room temperature above 15°C when installing the corner.

When wiping the surface after installation, use neutral detergent or water to prevent damage.

Product Storage and Construction Precautions

Avoid moisture and direct sunlight, and do not use outdoors.

There is a risk of deformation by ultraviolet rays.
